1. Experiments

Experiment - 1

Question:

Perform the following DB operations using Cassandra.

- Create a keyspace by name Employee
- Create a column family by name, Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name
- Insert the values into the table in batch
- Update Employee name and Department of Emp-Id 121
- Sort the details of Employee records based on salary
- Alter the schema of the table Employee_Info to add a column Projects which stores a
- set of Projects done by the corresponding Employee.
- Update the altered table to add project names.
- Create a TTL of 15 seconds to display the values of Employees.

Lab-1
Working with MongoDB

I. Create Database in MongoDB

```
Use myDB;
```

Confirm the existence of your database
```
db;
```

To list all databases
```
show dbs;
```

II CRUD (Create, Read, Update, Delete) Operation

1. To create a collection
```
db.createCollection("Student");
```

2. To drop a collection
```
db.student.drop();
```

3. Insert the following data into Student
```
db.Student.insert({_id: StudName: "MichelleJacintha", Grade: "VII", Hobbies: "InternetSurfing"});
```

4. Insert the document for "AryanDavid" in to the Students collection only if it does not already exist in the collection. Have error if it is already present, then update the document

PAGE NO :
DATE :

db.Student.update({_id:3, StudName:"Aryan David", grade:"VII"},{$set:{Hobbies:"Skating"}},{upsert:true});

5. Find Method

A. To search for documents from the collection based on certain search criteria
db.Student.find({StudName:"Aryan David"})

B. db.Student.find({},{StudName:1, Grade:1, _id:0});

C. db.Student.find({Grade:{$eq:'VII'}});

D. db.Student.find({Hobbies:{$in:['Chess','Skating']}})

E. db.Student.find({StudName:/M/});

F. db.Student.find({StudName:/e/});

G. db.Student.count();

H. db.Student.find().sort({StudName:-1})

II. Import data from a CSV file

mongoimport --db Student --collection airlines --type csv --headerline --file/home/hduser/Desktop/airline.csv

PAGE NO :
DATE :

IV Export data to a CSV file

mongoexport --host localhost --db Student --collection airlines --csv --out /home/hduser/Desktop/output.txt --fields "year", "Quarter"

V Save Method

Save() method will insert a new document.
db.Student.save({StudName: "Vamsi", Grade: "VI"})

VI Add a new field to existing Document.
db.Students.update({_id:4},{$set:{Location: "Network"}})

VII Remove the field in an existing Document
db.Student.update({_id:4}, {$unset: {Location: "Network"}}).

VIII Finding Document based on search criteria supressing few fields

db.Student.find({_id:1}, {StudName:1, Grade:1, _id:0});

db.Student.find({Grade:{$ne:'VII'}}).

db.Student.find({StudName:/S$/}).

to set a particular field value to NULL

PAGE NO :
DATE :

IX db.Student1.update({_id:3},{$set:{Location:null}})

X Count the number of document in Student collection.

db.Student.count()

XI Count the number of document in Student collection with grade VII

db.Student.count({Grade:"VII"})

Retrive:
db.Students.find({Grade:"VII"}).limit(3)

Sort the document in Ascending order.
db.Students.find().sort({StudName:1}).

Descending order.
db.Student.find().sort({StudName:-1}).

1.2 Experiment - 2

1.2.1 Question:

Perform the following DB operations using Cassandra:

- Create a keyspace by name Library
- Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter, Stud_Name, Book-Name, Book-Id, Date_of_issue
- Insert the values into the table in batch
- Display the details of the table created and increase the value of the counter
- Write a query to show that a student with id 112 has taken a book "BDA" 2 times.
- Export the created column to a csv file
- Import a given csv dataset from local file system into Cassandra column family.

Working with Cassandra

→ Create keyspace :

create keyspace students with replication = {'class': 'Simple strategy', 'replication_factor':1};

→ Describe the existing keyspaces :

Describe KEYSPACES;

→ For more details on existing keyspaces :

Select * from system_schema.keyspaces;

→ use the keyspace "students" :
Use students.

keyspace_name durable_write replicaton

system_authe true {'class': ..
}

→ To create table (column family) by name student_Info

Create Table Students_Info (Roll_No int PRIMARY KEY, StudName text, Date of Joining timestamp, last_exam_Percent double);

→ Lookup the names of all tables in the current keyspace
Describe TABLES;

PAGE NO :
DATE :

→ Describe TABLE students_Info;

CRUD

→ Insert:

```
BEGIN BATCH
INSERT INTO Students_Info ( Roll_No,
StudName, Date of Joining, last_Exam_Percent
VALUES ( 1, 'Asha', '2012-07-12', 79.9)
.
.
APPLY BATCH;
```

→ View data from the table "Students_Info"

roll no	dateofjoining	last_exam percent	studname
1	2012-07-11 ..	67.9	Smitha

→ View data from the table "Students_Info" where Roll no column either has a value 1 or 2 or 3

```
SELECT * FROM Students_Info where
Roll_No in (1,2,3);
```

→ To execute a non-primary key select * from students_info where Studname = "Asha";

→ So, create an INDEX on the Column

```
CREATE INDEX on Students_Info
(StudName);
```

PAGE NO :
DATE :

→ To specify the no of rows returned in the output.

```
select Roll_No, studname from
student_info Limit 2;
```

roll no	studname
5	Smitha
1	Asha

→ Alias for Column:

```
Select Roll_No as USN from student_info;
```

USN
5
1
2
4
6
3

→ Update

```
Update student_info SET StudName =
'David Sheen' where Roll_No = 2;
```

→ Delete

```
DELETE LastExamPercent from student
info where RollNo = 2
```

```
DELETE From student_info where Roll_No=2;
